

Say Aloha to TableSwipe

Communication Transaction Solutions, Inc. is proud to introduce an exciting new innovation in restaurant POS - TableSwipe. A portable wi-fi credit card terminal with an integrated printer, TableSwipe is a natural extension of the Aloha POS system. This innovative new software solution operates via the reliable Verifone VX610 terminal, which is the first and only wireless payment solution that has been VISA-certified for Debit PIN that is integrated with the Aloha POS.

Now, customers can pay at the table or at their car in mere seconds. They can use their debit PINs and enter a tip using the tip calculator, all via a familiar ergonomic, handheld terminal. Identity theft in the restaurant industry has become a growing problem. TableSwipe helps stop identity theft by ensuring that the customer's credit card never leaves their sight. Your customers will appreciate this extra level of security and service.

TableSwipe integrates directly to the Aloha POS system so that all existing POS system operations remain intact. Payment Transactions are processed directly in Aloha Table Service using Aloha EDC. A complete system includes the Aloha POS interface, easy to install secured/encrypted wireless network, and one or more terminals installed with training and support.

Say hello to the future of wireless POS technology. Say hello to TableSwipe.

- Customers can pay at the table or pay at their car.
- Stops identity theft.
- Speeds customer checkout and increases table turns.
- Lightning-fast transaction times of 2 to 4 seconds.
- Customers can use their debit cards, eliminating Visa and Mastercard fees.
- Your customers will love the convenience!
